EAE GROUP IN NUMBERS

Since 1973

EAE Group of Companies started its journey in the electrical sector in 1973 with the establishment of EAE Elektrik. Since its founding, EAE has grown rapidly, expanding its production and areas of operation by incorporating EAE Lighting in 1983, EAE Machinery in 1996, EAE Electrotechnics in 2004, and EAE Technology in 2009.

EAE carries out its production activities in accordance with ISO 9001 Quality Management, ISO 14001 Environmental Management, ISO 14064-1 Greenhouse Gas Management System, ISO 45001 Occupational Health and Safety Management, ISO 10002 Customer Satisfaction Management, ISO 50001 Energy Management System, and ISO 27001 Information Security Management System standards.

E-LINE KX

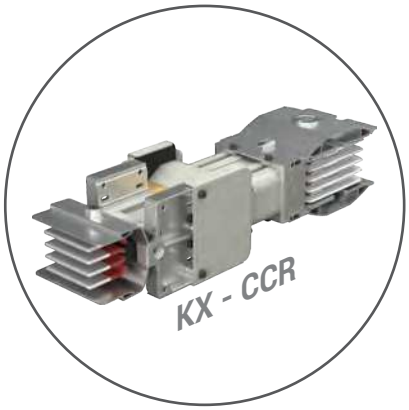

Introduction

Transportation and distribution of electricity especially at high ampere ratings used to be provided by paralelling a number of large sized cables. In order to support these cables in the buildings, there were used a lot of cable trays, cable ladders, under-floor cable channels, etc. Applications of cables, such as, fixing to cable channels, branching, connecting, calculating distances between cables for heat dissipation, adjusting difference lengths, etc. need special expert workers, more time, more effort, which means more money. Even after all above difficulties and expense, the result is not efficient enough. For example, there is no flexibility in this solution.

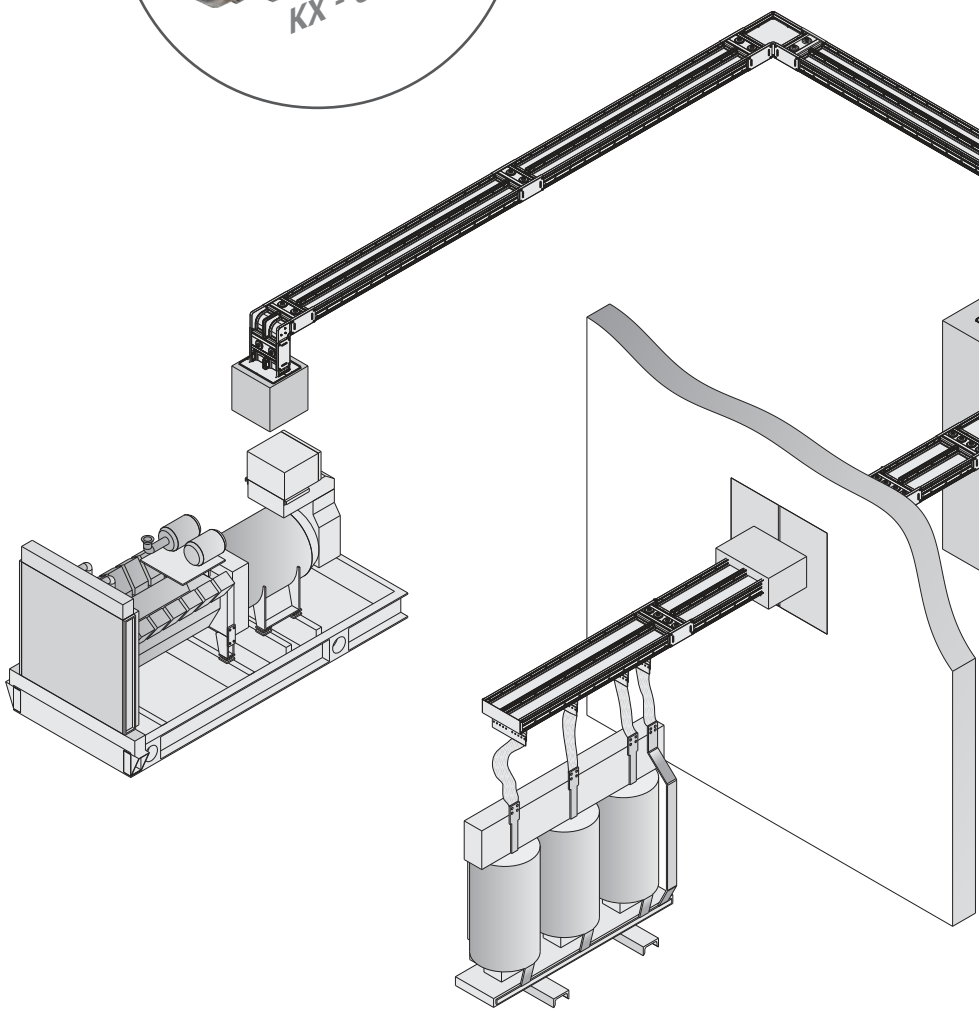

In order to eliminate all above disadvantages, modern **BUSBAR SYSTEMS** are developed. **EAE** manufactures **E-LINE** busbar systems from 25A up to 6.300A in order to convert above disadvantages to advantages. High technological, modular structured **E-LINE** busbar systems allow users to get safe energy how much and where ever they need by tap off boxes, easy and efficient planning, short installation time, better heat dissipation, automatic length adjustments, redesign / re-using capability, better electrical characteristics, etc.
E-LINE busbar systems are designed and certified as per IEC 61439-6 standard.

Standard Prefabricated Structure
E-Line KX busbar system can be adapted to any kind of building structure using. Space-saving prefabricated components.
All necessary components and fitting elements are manufactured items.

**** Special components can be manufactured in one week on request.***

Rapid and Efficient Installation
It has been important to keep abreast with the rapidly improving building technologies in civil engineering, the installation time was we have lowered by reducing the number of bolts on the joint points of the busbar.

Flexible Power Supply
Tap-off points at short intervals make electrical power available in all locations; the power supply can be adapted to different production processes simply by relocating the tap-off unit.

E-LINE KX

Technical Features

Hybrid Insulation
The perfect design for high current busbar systems is the "compact structure" where tin plated and insulated with B class polyester film and epoxy coated on conductors are tightly placed into the extruded aluminium housing. (Figure 1).

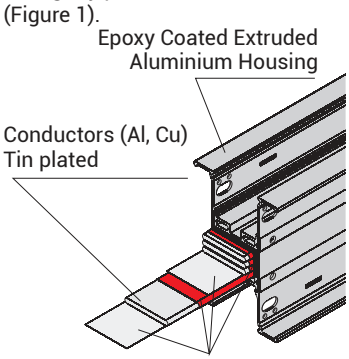

Figure 1

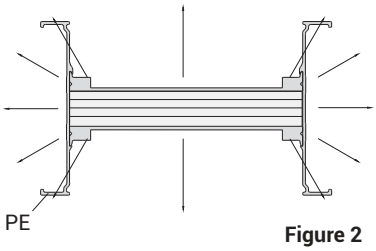

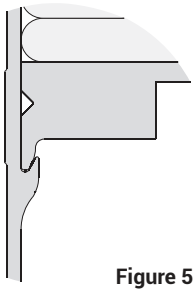

Figure 2

Heat Transfer
"In compact structure" there is no empty space filled with air and heat is easily transferred to the environment by the housing that works like a heat-shink (Figure 2).

Minimum Voltage Drop
In **E-Line KX**, inductive reactance is very low due to closely placed conductors.
The voltage drop comparison of compact and ventilated busbar that have same cross sectional area prove the importance of the compact structure.

High Short-Circuit Endurance
As there are no support points in "compact structure" momentum levers are not formed (Figure 1).
This feature ensures high short-circuit endurance (Figure 5).

Figure 5

One Bolt Joint Ensures Safety and Easy Installation
E-Line KX Busbars are installed by tightening the "one bolt joint". Belleville spring washers on both ends of the bolt retains the original contact pressure, ensuring a more secure, reliable and maintenance - free joint.
E-Line KX Busbar Systems are easily installed (Figures 3-4).

**** The bolt is tightened to 83 Nm (60 lbft) using the torque spanner.***

Figure 3

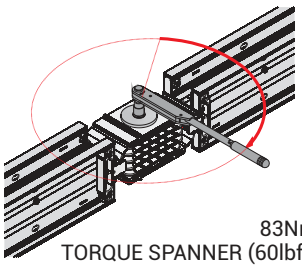

Figure 4

Easy and Safe Installation:
Due to alignment piece on the joint point, block joint element and busbar tray are aligned. This makes installation easier and correct on the right axes. (Figure 6).

Figure 6

E-LINE KX

Distribution & Horizontal Applications

While designing an electrical distribution system with E-Line KX a few approximate details will be necessary.

- Location, number, type and approximate ratings of loads,
- Transformer rates and short-circuit capacities, Utilization factor=a,
- System coordination with other distribution system (heat, water, etc.),
- Determining the route of E-Line KX on layout, If necessary, coordination of E-Line KX Busbar with E-Line KO-II runs,
- Deciding on suitable hanger types.

Utilization Factor (α)
Utilization factor (α) depends on the type and number of loads.
It is usually around 0.7 or lower. The utilization factor of a line that supplies electricity to motors and lighting systems is usually lower than 0.6.
It is as low as 0.30 in weld shops of car factories, it can be 1 in lines where only one big load is supplied.

Voltage Drop
For practical voltage drop calculation, necessary values, formula and easy calculation methods are given on the technical characteristics table on pages 6-9.

Rated Current
The current is calculated using the following equation:

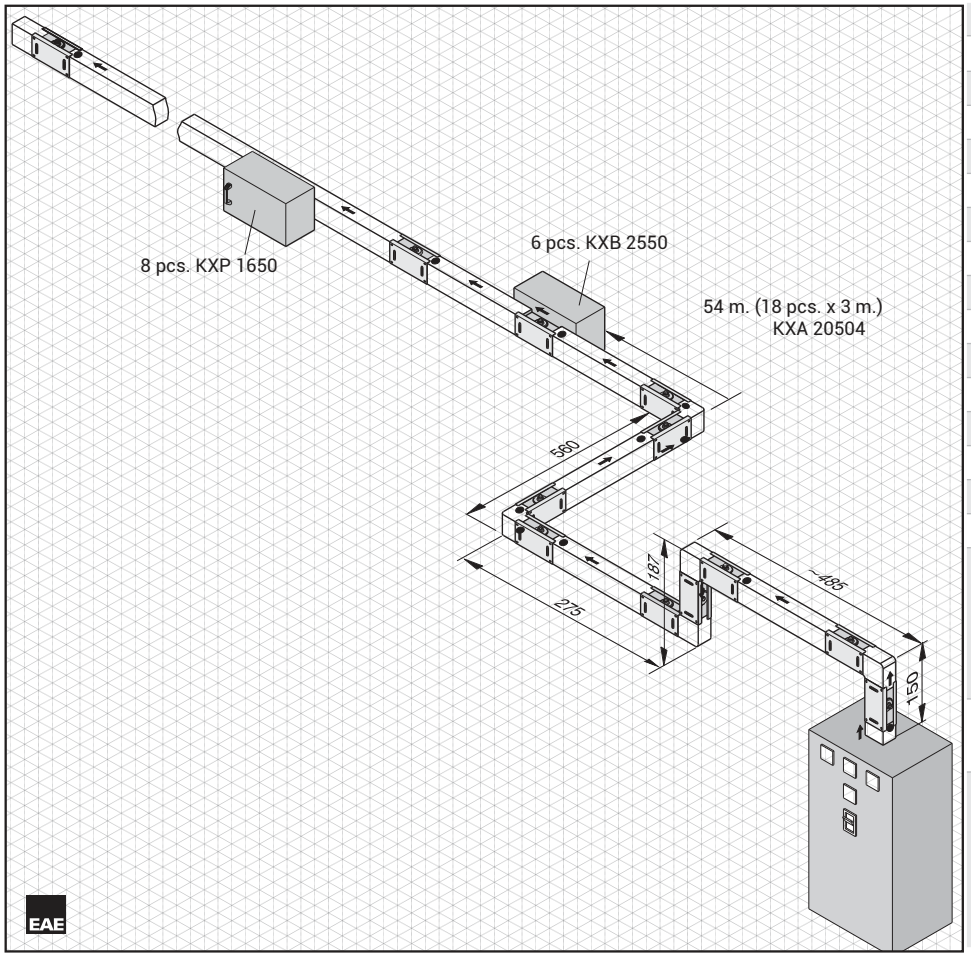

$$I_B = \frac{P.\alpha}{\sqrt{3}.U.\cos\varphi}$$

I_B = Operation current (A)
P = Installed load (W)
α = Utilization factor
U = Supply voltage (V)

- Busbar current rating is chosen as equal to or higher then the calculated IB current.
- After the voltage drop calculation if the chosen current rate is not convenient, a higher rating is chosen.

Short-Circuit
Tested short-circuit capacities are given on technical characteristics table on pages 6-9.

Busbar Installation Plan
Our distributor's project & design departments will help you for preparing the installation plans on request.

Components List

Item	Components		Quantity
1	KXA 20504 - STD	Busbar (20 x 3m.)	60 m.
2	KXA 20504 - D	Downwards Elbow	2 pcs.
3	KXA 20504 - R	Right Elbow	1 pc.
4	KXA 20504 - U	Upwards Elbow	1 pc.
5	KXA 20504 - L	Left Elbow	1 pc.
6	KXA 20504 - P11	Panel Connection	1 pc.
7	KXA 20504 - S10	End Closer	1 pc.
8	KXA 20504 - X95	Special Straight Length	1 pc.
9	KXA 20504 - X120	Special Straight Length	1 pc.
10	KXA 20504 - X122	Special Straight Length	1 pc.
11	KXA 20504 - X200	Special Straight Length	1 pc.
12	KXA 20504 - X174	Special Straight Length	1 pc.
13	KXP 1650	Tap-off Box	8 pcs.
14	KXB 2550	Tap-off Box	6 pcs.

E-LINE KX

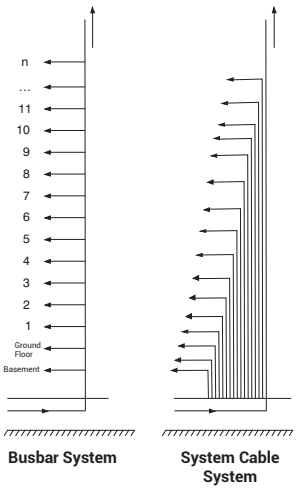

Riser & Vertical Applications

As each building's structure is different than the other for vertical applications of **E-Line KX** special projects has to be designed.

The details on this page briefly explain the necessary information for drawing a vertical application project.

Project Design

The details below should be sent to our Project & Design department.

- Location and dimensions of the floor penetration where busbar will be installed.
- Number, height and ceiling thickness of storeys. (a=..., h=...)
- Connected load for each storey.
- Supply type of the vertical line (busbar or cable).

Please send the information to us by fax or e-mail with a sample drawing in Figure 1.

In multipath busbars in high-rise vertical shaft applications;
Due to floor heights, floor thickness and product tolerances, the window or additional point alignments on the upper floors may not be the same. In order for the Tap off boxes to be aligned and the joint point not to coincide with the floor transitions, the assembly should be continued by making measurements on each floor.

■ EAE is not responsible for the potential risks that may occur in cases where the products in our catalogue are used outside of the standard phase sequences as shown in the catalogue.

Voltage Drop Calculation

Generally Voltage drop of a busbar system can be calculated with the following formula.

$$\Delta U = \sqrt{3}.L.I.(R.\cos\varphi + X.\sin\varphi)\ 10^{-3}\ [V]$$

ΔU = Voltage Drop (V)
L = Line Length (m)
I = Line Current or Load (A)
R = Resistance (mΩ/m)
X = Reactance (mΩ/m)

S = Supply Point

■ All phase conductor characteristics had been determined according to Annex BB of IEC / EN 61439-6.
■ Fault-loop zero-sequences impedances had been determined according to Annex CC of IEC / EN 61439-6.
■ Fault-loop resistances and impedances had been determined according to Annex DD of IEC / EN 61439-6.
* IK10 corresponds to impact energy of 20J according to IEC 62262.

Voltage Drop Calculation

Generally Voltage drop of a busbar system can be calculated with the following formula.

$$\Delta U = \sqrt{3}.L.I.(R.\cos\varphi + X.\sin\varphi)\ 10^{-3}\ [V]$$

ΔU = Voltage Drop (V)
L = Line Length (m)
I = Line Current or Load (A)
R = Resistance (mΩ/m)
X = Reactance (mΩ/m)

S = Supply Point

■ All phase conductor characteristics had been determined according to Annex BB of IEC / EN 61439-6.
■ Fault-loop zero-sequences impedances had been determined according to Annex CC of IEC / EN 61439-6.
■ Fault-loop resistances and impedances had been determined according to Annex DD of IEC / EN 61439-6.
* IK10 corresponds to impact energy of 20J according to IEC 62262.

E-LINE KX

Standard Straight Length

Bolt-on

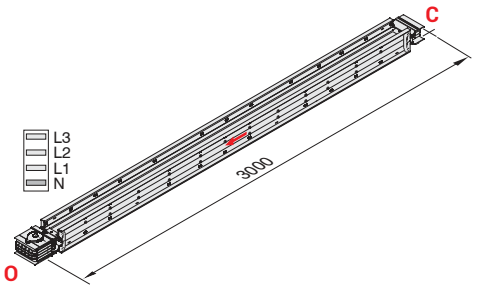

Electrical energy up to 1000 A can be supplied from the joints of bolt-on type by bolt-on tap-off boxes.

Note:
Busbar energy should be turned off, before installing bolt-on type tap-off boxes.

Bolt-on Standard Straight Length Busbar **- S T D**

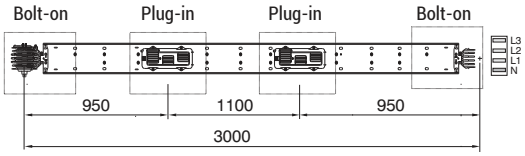

Sample Order:
2500 A, Aluminium, Bolt-on, IP 55, 4 Conductors

KXA 25504 - B - STD

Applications:
- As feeder or sub-feeder line,
- Where a load has to be supplied
- from the busbar.

Plug-in

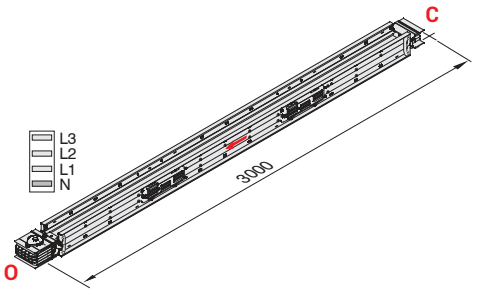

Electrical energy up to 1000 A can be supplied from the joints and up to 630 A can be supplied from the plus.

Plug-in Standard Straight Length Busbar **- S T D**

Sample Order:
1250 A, Copper, Plug-in, IP 55, 4 Conductors

KXC 12504 - P - STD

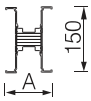

Note:
Please, determine number and side of plug-in points (single or double side).

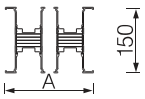

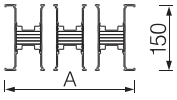

Applications:
- In application of bolt-on
- As vertical feeder line high rise buildings
- For frequent energy supply
- If continuous energy needed, while tap-offs installed.

Special Straight Length

Sample Order:
2500 A, Copper, Bolt-on, IP 55, 4 Conductors, 147 cm

KXC 25504 - B - X - 147

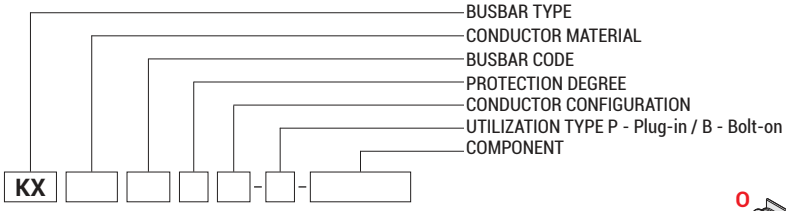

Note:
Bolt-on Minimum Length = 35cm
Plug-in Minimum Length = 100cm

Important Notice for the Tap-off box use;
*It is not possible to install tap-off box at joint side for KXA 400A, KXA500A, KXA 630A, KXC 550A, KXC 650A and KXC 800A. KXA 400A, KXA500A, KXA 630A, KXC 550A, KXC 650A and KXC 800 busbar range may have plug-in windows at one side only. It is highly recommended to consider these points in your project designs.

E-LINE KX

Expansions

Vertical Expansion

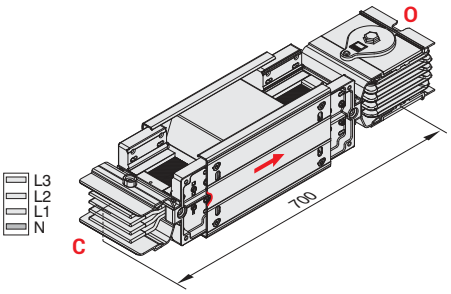

Used for vertical applications in multi storey buildings.

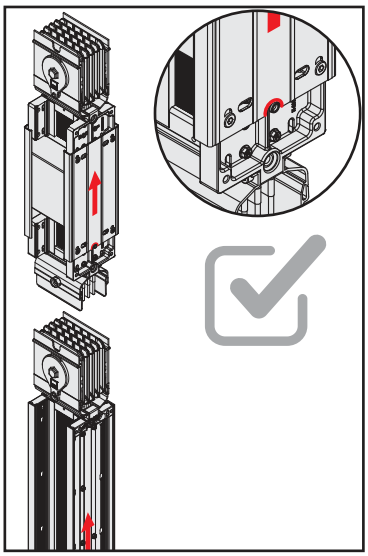

One vertical expansion unit is advised to be used at every floor between fixed support points.

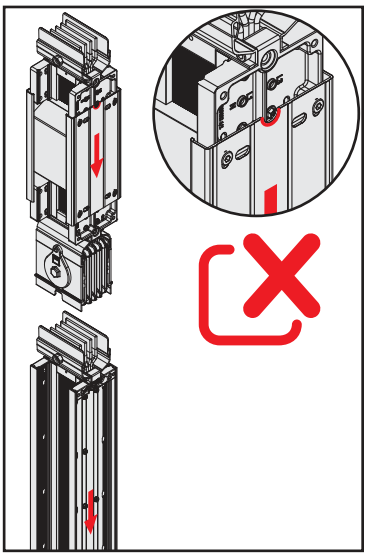

Vertical Expansion **- D D T**

Sample Order:
2000 A, Copper, Bolt-on,
IP 55, 4 Conductors

KXC 23504 - B - DDT

Horizontal Expansion

Used at every 40m in long horizontal straight lines and building expansion points.

Not:1) Horizontal expansion joint should be utilised if busbar line is crossing to adjacent through building expansion joints.

2) This module is used on the long busbar line (>75m.) where line is ended by end closure and is not fixed on the support rigidly.

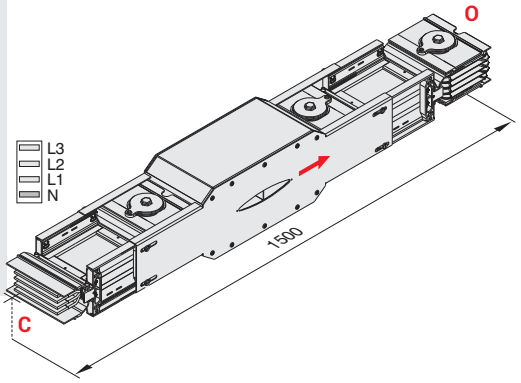

3) Horizontal expansion joint has sufficient movement span of 54mm.

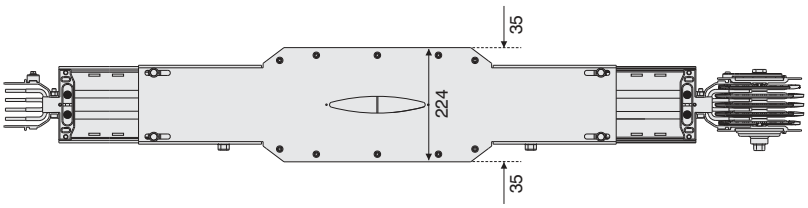

EAE requests to be consulted during design stage.

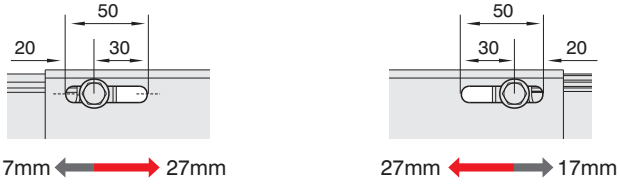

Horizontal Expansion **- Y D T**

Sample Order:
2500 A, Aluminium, Bolt-on,
IP 55, 4 Conductors

KXA 25504 - B - YDT

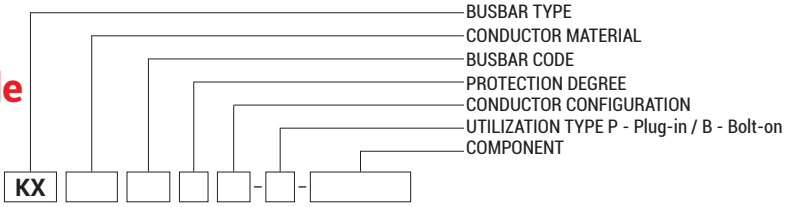

■ The dimensions given above are minumum values. ■ Please call us for non-standard components.

E-LINE KX

Phase Transposition Module

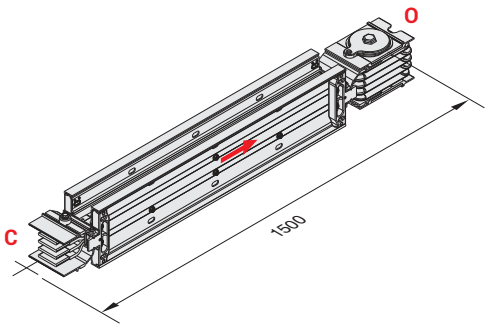

Phase Transposition Module

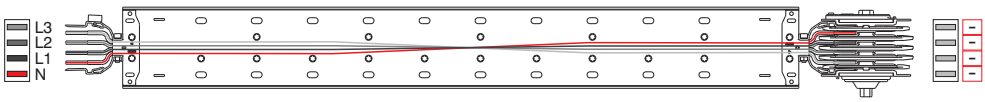

They used for transposition of phase sequence.

Phase Transposition Module - F D M

Sample Order:
2500 A, Aluminium, Bolt-on,
IP 55, 4 Conductors

KXA 25504 - B - FDM

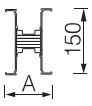

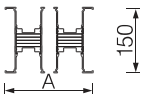

When installation of the Tap-Off Boxes needed after the phase changer box , an approvement must be taken from the customer representative in advance.

Easy Installation System of Tap-off Boxes

The patented hinge system is designed to allow the installation of plug-in tap-off boxes simply and easily.

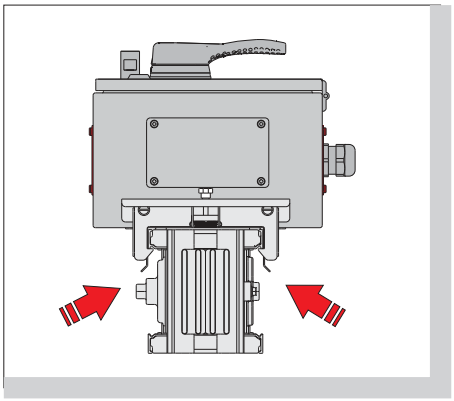

- Please call us for non-standard components.
- As of January 1, 2025, it is produced in RAL 7035. For different color options, please contact our customer representatives.
- When requesting special size tap off boxes, make sure that the distance between the two plug point does not prevent the installation of the tap off boxes.

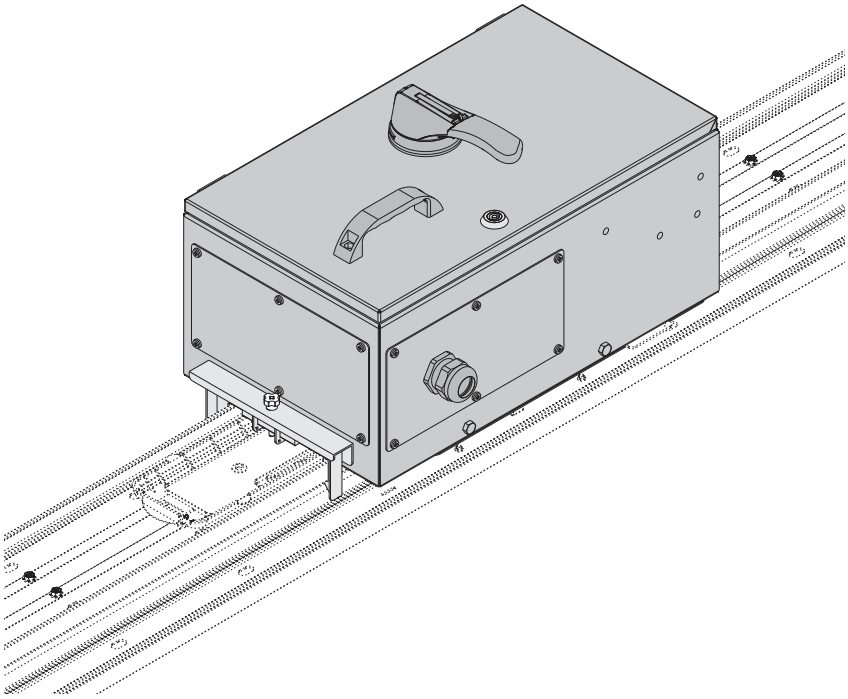

E-LINE KX

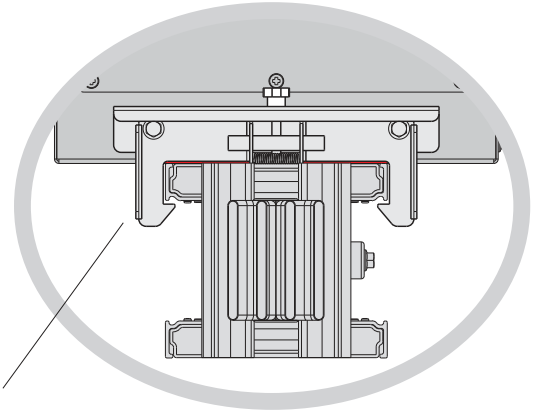

Tap-off Boxes

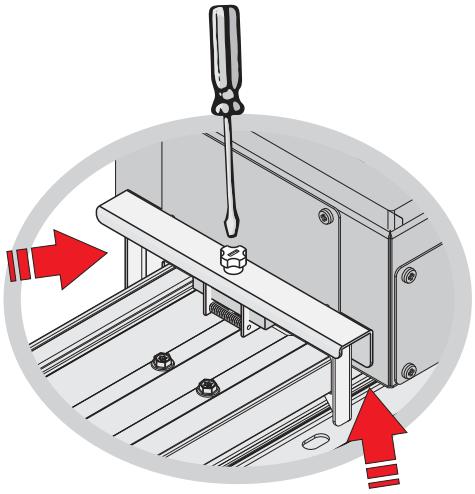

Fixing System of Tap-off Boxes to Busbars

Hook system, which is used for fixing of tap-off boxes on busbars.

Universal Tap-off Boxes

Tap off boxes can be equipped with any brand of switches, circuit breakers and etc. Please inform EAE the type and brand of choosen MCCB, when ordering.

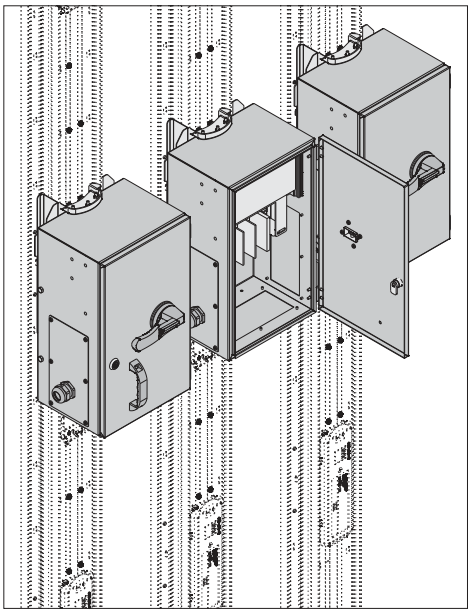

- Please call us for non-standard components.
- As of January 1, 2025, it is produced in RAL 7035. For different color options, please contact our customer representatives.
- When requesting special size tap off boxes, make sure that the distance between the two plug point does not prevent the installation of the tap off boxes.

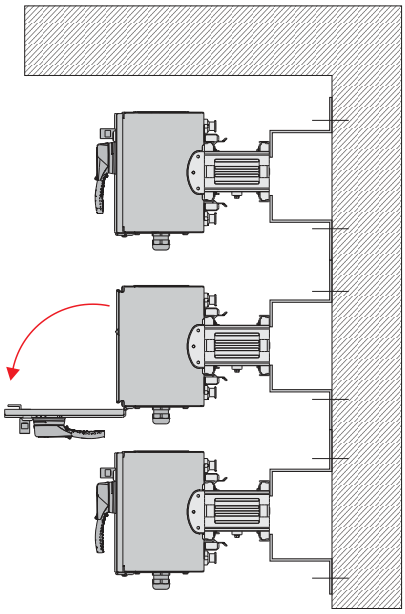

E-LINE KX

Technical Features

Side Opening Box Lids

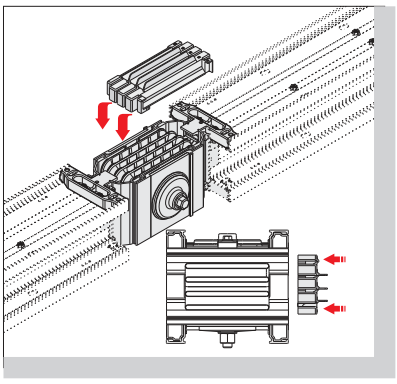

A new generation of tap-off box with side opening lids enables easier connection to protective devices and maintenance.

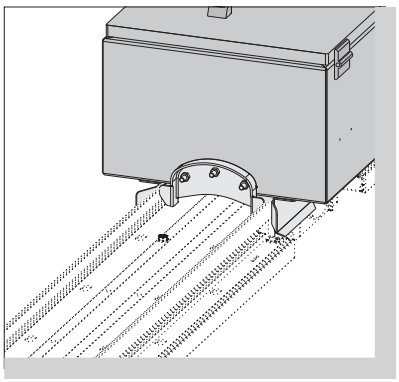

Bolt-on Tap-off Boxes

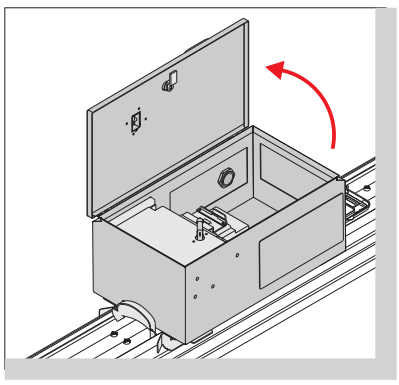

- Bolt-on tap-off boxes are designed to be installed at the joints without removing the joint block.
- The range of tap off boxes from 160A upto 1.000A.
- Busbar run must be de-energized before installing bolt-on tap-off boxes.

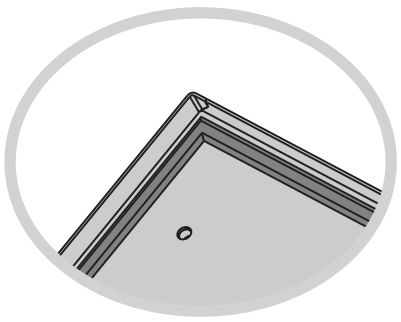

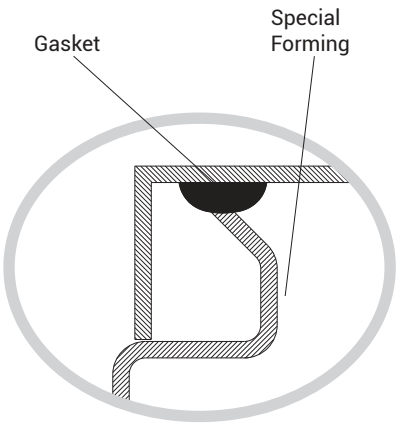

Effective Gasket

- Protection from dust and humidity due to effective gasket system.
- High IP Protection due to special forming.

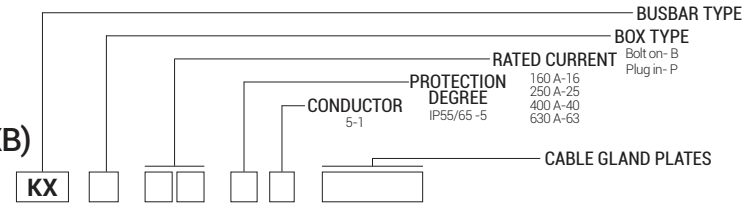

■ Please call us for non-standard components.
■ As of January 1, 2025, it is produced in RAL 7035. For different color options, please contact our customer representatives.
■ When requesting special size tap off boxes, make sure that the distance between the two plug point does not prevent the installation of the tap off boxes.

Sample Order:

Plug-in / 400 A / IP-55 /
5 conductors, empty tap-off box

KXP 4051 - B

Tap-off Boxes	A (mm)	B (mm)	C (mm)	D (mm)	Standard Gland
KXP 16	520	320	250	150	RPK3
KXP 25	520	320	250	150	RPK4
KXP 40	700	320	250	255	RP4
KXP 63	700	320	250	255	RP4

* D value varies as per the used switch.

***Tap-off boxes can be equipped with any brand of switches and etc.**

Gland Type	Max. External Diameter of Cable Cros-section (mm)
M25	Ø 18
M32	Ø 26
M40	Ø 33
M50	Ø 39
M63	Ø 45
Special for EAE	Ø 60

- Please call us for non-standard components.
- As of January 1, 2025, it is produced in RAL 7035. For different color options, please contact our customer representatives.
- When requesting special size tap off boxes, make sure that the distance between the two plug point does not prevent the installation of the tap off boxes.

E-LINE KX

Measuring a Special Length

After installation of standard busbar 3m lengths, you will be in need of special lengths which are smaller than 3m The minimum length for these special elements can be 350 mm. Please measure the lengths of these modules as shown below.

Length A is measured between housing of 2 busbars in cm. A. The special length is calculated by deducting 250mm from this measured length.

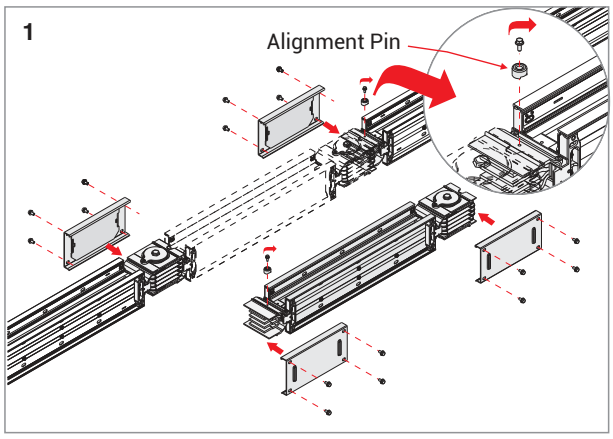

X=A-250 (mm) X=Length of Special Busbar (The busbar module will be manufactured as per X value.)

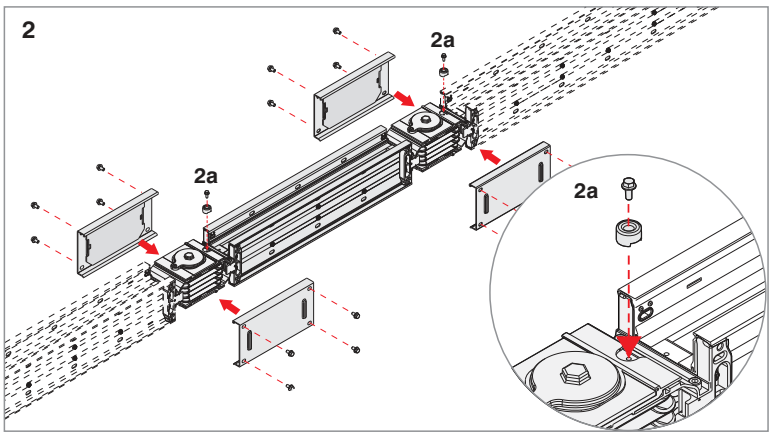

■ Please call us for non-standard components.

E-LINE KX

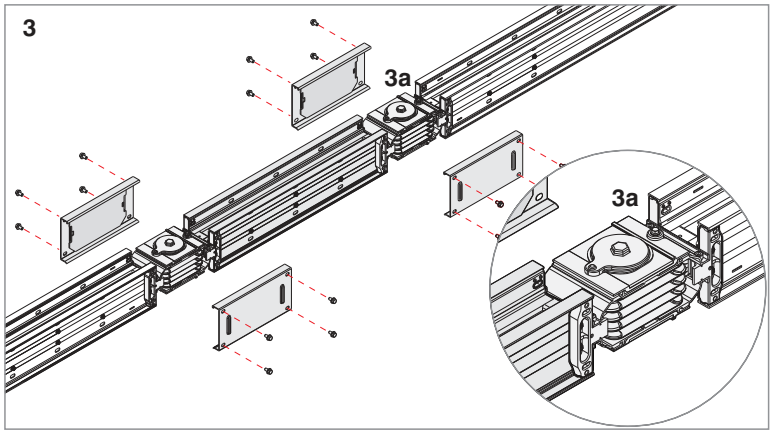

Measuring a Special Length

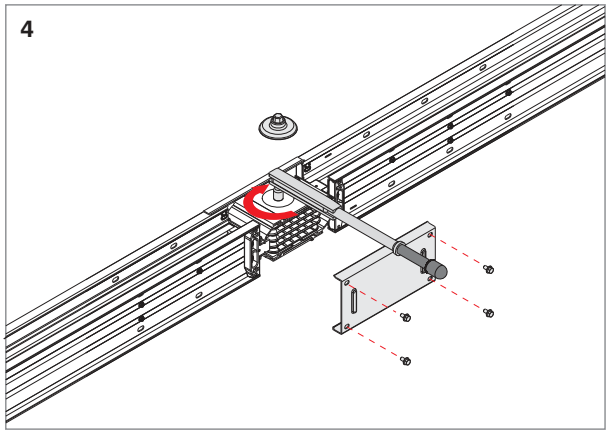

1- Remove Alignment Pin on the busbar, without block joint.

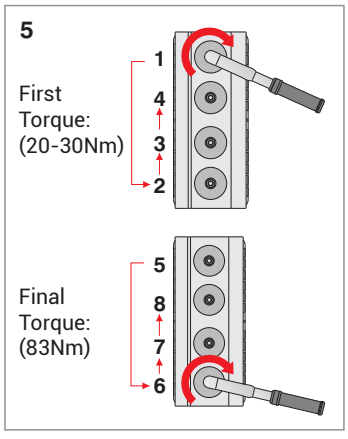

2- Insert the piece aligning conductors correctly. Fix back the Alignment pin.

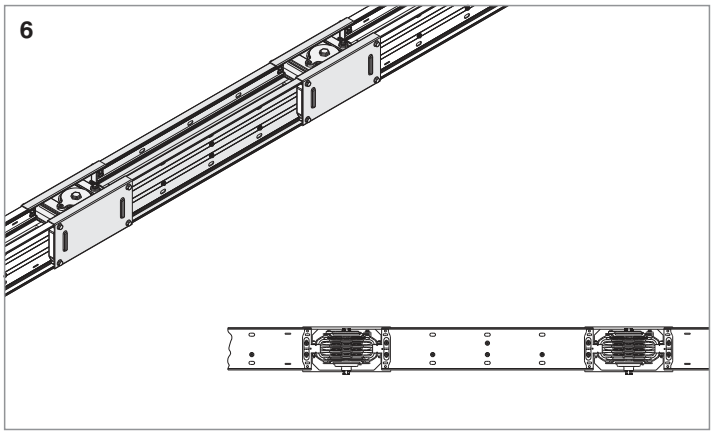

3- Make sure busbar piece is aligned according to alignment pin.

4- Fix one of the joint cover to stabilize joint. Apply 83Nm to the main bolt.

5- If there are more than one bolt for the same phase, bolts shall be tighten by hand approximately 20-30Nm as per above sequence, then 83Nm shall be applied at final torque with the same sequence.

6- Fix the remaning joint cover. Joint installation is completed.

Note: If the final joint cover does not close correctly, it indicates the busbar is not completely aligned. Release the bolts and reapply the sequence from figure 4 to complete the joint.

Please check related installation manual for details.

CE DECLARATION OF CONFORMITY

Product Group E-Line KX Busbar Energy Distribution System

Manufacturer EAE Elektrik Asansor End. Insaat San. ve Tic. A.S.

Akcaburgaz Mahallesi, 3114. Sokak,
No:10 34522 Esenyurt-Istanbul

The objects of the declaration described below is in conformity with the relevant Union harmonisation legislation. This declaration of conformity is issued under the sole responsibility of the manufacturer.

PRODUCT OVERVIEW

400A ... 6300A COMPACT BUSBAR (E-LINE KX)

1- Standards & Certification:

-Busbar system shall be designed and manufactured as per IEC 61439-6 standard, which requires below listed tests. Each busbar rating shall have a separate type test certificate from an independent internationally accredited laboratory including below tests:
10.2- Strength of material and parts, 10.2.2- Resistance to corrosion, 10.2.3- Properties of insulating materials, 10.2.3.1- Verification of thermal stability of enclosures, 10.2.3.2- Verification of resistance of insulating materials to abnormal heat and fire due to internal electric effects, 10.2.6- Mechanical impact, 10.2.7- Marking, 10.2.101- Ability to withstand mechanical loads , 10.2.101.1- Test procedure for a straight busbar trunking unit, 10.2.101.2- Test procedure for a joint, 10.2.101.3- Resistance of the enclosure to crushing, 10.3- Degree of protection of assembly, 10.4- Clearances and creepage distances, 10.5-Protection against electric shock and integrity of protective circuits, 10.5.2- Effective earth continuity between the exposed conductive parts of the assembly and the protective circuit, 10.5.3- Short-circuit withstand strength of the protective circuit, 10.9- Dielectric properties, 10.9.2- Power-frequency withstand voltage, 10.9.3- Impulse withstand voltage, 10.10- Verification of temperature rise, 10.11- Shortcircuit withstand strength, 10.101- Resistance to flame propagation, 10.102- Fire resistance in building penetrations, Annex BB Phase conductor characteristics, Annex CC Fault-loop zero-sequences impedances, Annex DD Fault-loop resistances and reactances.
-Busbar system shall have CE marking.
-The manufacturer of busbar system shall have ISO 9001 and ISO 14001 certification.
-Each product shall have a "Type Label" including coding system, which identifies the brand, type of the unit, number of conductors and electrical details. The same coding shall be on the related certificate and catalogue.

2- Electrical Characteristics

-Busbar systems nominal insulation voltage shall be 1000 V.
-As per ampere rates, minimum short circuit values shall be as given below;

For Aluminium Conductors;

400-500A	:1 sec/rms 16kA, Peak 32kA
630A	:1 sec/rms 25kA, Peak 52,5kA
800-1000A	:1 sec/rms 35kA, Peak 73,5kA
1000A	:1 sec/rms 50kA, Peak 105kA
1250-1350-1700A	:1 sec/rms 60kA, Peak 132kA
1600-2000-2500A	:1 sec/rms 80kA, Peak 176kA
2500-3200A	:1 sec/rms 100kA,Peak 220kA
3200A and above	:1 sec/rms 120kA,Peak 264kA

For Copper Conductors;

550-650A	:1 sec/rms 24kA, Peak 50,4kA
800A	:1 sec/rms 40kA, Peak 84kA
1000A	:1 sec/rms 50kA, Peak 105kA
1250-1350A	:1 sec/rms 60kA, Peak 132kA
1600-2000A	:1 sec/rms 80kA, Peak 176kA
2500A	:1 sec/rms 100kA,Peak 220kA
3300A and above	:1 sec/rms 120kA,Peak 264kA

2.1- Housing

-Busbar system shall have "Sandwich-Compact" structure. Conductors shall be packed and placed into the housing without leaving air gap in order to provide low reactance.
-Housing shall be made of thermal processed, extruded aluminium, RAL7038-Electrostatic painted.
-Compact structure of the housing shall be provided by M6 screws applied at every 19cm along the entire length.
-The sandwich-compact structure shall continue at the plug-in points too. There shall not be air gap between conductors at the plug-in points.

2.2- Conductors

Aluminium or Copper conductors shall be epoxy coated and tin plated at the joints upon the wire configuration and required numbers, which are described below.
-Compact busbar system shall have aluminium conductors between 400A – 6000A.
- Compact busbar system shall have copper conductors between 550A – 6300A.
- Compact busbar system shall have the following number of conductors and wire configuration;
  a) 4 Conductors: (4 full size conductors + PE (housing)).
  b) 4 ½ Conductors: (4 full size conductors + PE (50% earth conductor + housing)),
  c) 5 Conductors: (5 full size conductors + PE (100% earth conductor + housing)),
-Phase conductors and neutral conductor shall have the same cross-section and they shall be insulated.
-Aluminium conductors shall be of EC grade aluminium. Minimum conductivity shall be 34m/mm².Ω.
-Copper conductors shall be minimum 99,95% electrolytic copper. Minimum conductivity shall be 56m/mm².Ω.

2.3- Insulation

-Insulation system shall be suitable for 1.000V continuous operation. Conductors shall be minimum thermo-set epoxy coated. Conductor size shall be designed so that temperature rise on the conductors shall
not exceed 130C degree at nominal current, which helps to global heating problem. With this reason, insulation class shall be "B class".

2.4- Joint Structure

-Electrical and mechanical connection shall be made by placing conductor joints into the joint blocks of the connected conductors and followed by tightening and fastening of the joint bolts.

2.5- Protection

-Protection degree of the housing and joints shall be IP55/IP65. Call our company for your IP65 orders.
(IP65 is not recommended for outdoor applications. Please check CCR catalog.)

2.6- Acessories

-Busbar system shall have all necessary accessories (elbows, offsets, panel-transformer connections, reductions, etc.) Manufacturer shall supply special dimensioned units in short time, if the project conditions requires.
-For horizontal runs, a horizontal expansion unit shall be used at every 40m and expansion points of the building.
-For vertical applications, a vertical expansion unit shall be used at every floor. Busbar system shall be rigidly fixed by supports at every floor.

3- Tap Off Boxes

-Both, Feeder and Plug-in busbar systems shall be suitable for bolt-on type tap off box connections at the joints up to 1.000A.
-Bolt-on tap off boxes shall be installed to the joints without changing or adding any piece. Bolt-on tap off boxes shall be able to be moved between different rated busbars.
-Plug-In busbars shall have minimum 2 plug-in points on each 300cm length. Plug-in tap off box sizes shall be up to 630A. Unused plug-in points shall have covers, which can provide IP55 protection degree.
-Plug-in tap off boxes shall be suitable to install or removed from busbars without switching off the power on the busbar.
-Contacts of plug-in tap off box shall be plated by silver.
-Tap off boxes shall be manufactured of sheet steel and epoxy painted RAL7035 colour.
-Plug-in tap off boxes shall have electromechanical safety interlock system. Which means;
a-) Electromechanical interlock mechanism shall ensure that the tap off box cannot be removed mechanically from the busbar, when the switch is at "ON" position.
b-) Electromechanical interlock mechanism shall ensure that, cover of the box can be opened only, when the switch is at "OFF" position.
c-) When the cover is opened, inside protection degree shall be minimum IP2X against accessing to live conductors.
d-) While inserting the contacts of plug-in tap off box, earth contact shall make the first touch. While removing, it shall be disconnected last.
-Tap off boxes shall be suitable for any brand of MCCBs. Electromechanical interlock mechanism shall be suitable for all these MCCBs too.

4- Installation and Commisioning

-Busbar systems shall be installed as per Single-Line drawings respect to required ampere rates and manufacturer installation guide (torque values, lockers, etc.). Electrical installator shall run an insulation test after installation according to manufacturers test procedures. The results of the test shall be reported to the manufacturer. Minimum insulation value shall be 1 Mohm.

SUSTAINABLE FUTURE

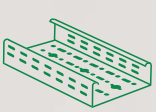

Sustainability Management at EAE Elektrik

As part of our goal to support sustainable development and green transformation, measuring, evaluating, and managing all economic, environmental, and social impacts resulting from our sustainability practices is a key governance priority for EAE Elektrik. We act with great care in analyzing, monitoring, and managing the economic, environmental, and social impacts and risks that arise throughout our value chain in both our national and global operations.
