

CERTIFICATE

THE METAL TRAY AND SYSTEM

The European Parliament and the Council of the European Union have adopted the DIRECTIVE 2002/95/EC of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS), and the DIRECTIVE 2002/96/EC on waste electrical and electronic equipment (WEEE).

They are designed to tackle the fast increasing waste stream of electrical and electronic equipment and to complement European Union measures on landfill and incineration of waste..

PEMSA confirms through this note that Rejiband, the metal mesh trays, and Pemsaband, the channel system, and their accessories, used for cable support and management as part of the fixed electrical installations in buildings or industrial facilities, are compliant with these directives, 2002/95/CE and 2002/96/CE, and that they can be installed as they were until now.
